# **TEST REPORT**

**Report No.**: CQASZ20190900963E-02

Applicant: FUZHOU EMAX ELECTRONIC CO., LTD.

Address of Applicant: Building #12-#16, CangShan Industrial Area, JuYuanZhou JinShan District,

FuZhou, China.

**Equipment Under Test (EUT):** 

EUT Name: WIFI Weather Station with Clock

Model No.: WEC-19W4

Brand Name: N/A

FCC ID: WEC-19W4

Standards: 47 CFR Part 15, Subpart C

**Date of Receipt**: 2019-09-24

**Date of Test:** 2019-11-01 to 2019-11-11

Date of Issue: 2019-11-11
Test Result: PASS\*

\* In the configuration tested, the EUT complied with the standards specified above

Tested By:

(Tom Chen)

Sheek Luo)

Approved By:

(Jack Ai)

The test report is effective only with both signature and specialized stamp, The result(s) shown in this report refer only to the sample(s) tested. Without written approval of CQA, this report can't be reproduced except in full.

| Address of Applicant:    | Building #12-#16, CangShan Industrial Area, JuYuanZhou JinShan District, FuZhou, China. |
| Manufacturer:            | FUZHOU EMAX ELECTRONIC CO., LTD.  |
| Address of Manufacturer: | Building #12-#16, CangShan Industrial Area, JuYuanZhou JinShan District, FuZhou, China. |

# 4.2 General Description of EUT

| •                     |                                      |
|-----------------------|--------------------------------------|
| Product Name:         | WIFI Weather Station with Clock      |
| All Model No.:        | WEC-19W4                             |
| Trade Mark:           | N/A                                  |
| Hardware Version:     | V1.7                                 |
| Software Version:     | V1.3                                 |
| Operation Frequency:  | 2402MHz~2480MHz                      |
| Bluetooth Version:    | V4.0                                 |
| Modulation Type:      | GFSK                                 |
| Transfer Rate:        | 1Mbps                                |
| Number of Channel:    | 40                                   |
| Product Type:         |                                      |
| Test Software of EUT: | EK8105-G1 (manufacturer declare )    |
| Antenna Type:         | PCB antenna                          |
| Antenna Gain:         | 0dBi                                 |
| EUT Power Supply:     | 2XAA battery DC3V or DC5V by adapter |

Report No.: CQASZ20190900963E-02

| 6                                   | 2414MHz   | 16      | 2434MHz   | 26      | 2454MHz   | 36      | 2474MHz   |
| 7                                   | 2416MHz   | 17      | 2436MHz   | 27      | 2456MHz   | 37      | 2476MHz   |
| 8                                   | 2418MHz   | 18      | 2438MHz   | 28      | 2458MHz   | 38      | 2478MHz   |
| 9                                   | 2420MHz   | 19      | 2440MHz   | 29      | 2460MHz   | 39      | 2480MHz   |

#### Note

In section 15.31(m), regards to the operating frequency range over 10 MHz, the lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel                    | Frequency |
|----------------------------|-----------|
| The lowest channel (CH0)   | 2402MHz   |
| The middle channel (CH19)  | 2440MHz   |
| The highest channel (CH39) | 2480MHz   |

Report No.: CQASZ20190900963E-02

#### **Run Software:**

### 4.4 Test Environment

| Operating Environment:  |   |
|-------------------------|---|
| Radiated Emissions:     |   |
| Temperature:            | 25.2 °C   |
| Humidity:               | 47 % RH   |
| Atmospheric Pressure:   | 992 mbar  |
| Conducted Emissions:    |   |
| Temperature:            | 24.8 °C   |
| Humidity:               | 44 % RH   |
| Atmospheric Pressure:   | 992 mbar  |
| Radio conducted item te | st (RF Conducted test room):  |
| Temperature:            | 25 °C   |
| Humidity:               | 49 % RH   |
| Atmospheric Pressure:   | 1005mbar  |
| Test mode:              |   |
| Transmitting mode:      | Use test software to set the lowest frequency, the middle frequency and the highest frequency keep transmitting of the EUT. |
|                         | Note: In the process of transmitting of EUT, the duty cycle >98%.   |

# 4.5 Description of Support Units

The EUT has been tested with associated equipment below.

1) Support equipment

| Description | Manufacturer | Model No.                | Certification | Supplied by |
|-------------|--------------|--------------------------|---------------|-------------|
| Adapter     | HUAXU        | HX075-0501200-<br>AU-001 | FCC           | Client      |
| PC          | Lenovo       | ThinkPad E450c           | FCC           | CQA         |

### 4.6 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate.

The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities.

The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16 - 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the **Shenzhen Huaxia Testing Technology Co., Ltd.** guality system acc. to DIN EN ISO/IEC 17025.

Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for CQA laboratory is reported:

| No. | Item                               | Uncertainty        | Notes |
|-----|------------------------------------|--------------------|-------|
| 1   | Radiated Emission (Below 1GHz)     | 5.12dB             | (1)   |
| 2   | Radiated Emission (Above 1GHz)     | 4.60dB             | (1)   |
| 3   | Conducted Disturbance (0.15~30MHz) | 3.34dB             | (1)   |
| 4   | Radio Frequency                    | 3×10 <sup>-8</sup> | (1)   |
| 5   | Duty cycle                         | 0.6 %.             | (1)   |
| 6   | Occupied Bandwidth                 | 1.1%               | (1)   |
| 7   | RF conducted power                 | 0.86dB             | (1)   |
| 8   | RF power density                   | 0.74               | (1)   |
| 9   | Conducted Spurious emissions       | 0.86dB             | (1)   |
| 10  | Temperature test                   | 0.8℃               | (1)   |
| 11  | Humidity test                      | 2.0%               | (1)   |
| 12  | Supply voltages                    | 0.5 %.             | (1)   |
| 13  | Frequency Error                    | 5.5 Hz             | (1)   |

<sup>(1)</sup>This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Report No.: CQASZ20190900963E-02

#### 4.7 Test Location

#### Shenzhen Huaxia Testing Technology Co., Ltd,

1F., Block A of Tongsheng Technology Building, Huahui Road, Dalang Street, Longhua District, Shenzhen, China

### 4.8 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • CNAS (No. CNAS L5785)

CNAS has accredited Shenzhen Huaxia Testing Technology Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

#### • A2LA (Certificate No. 4742.01)

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 4742.01.

### • FCC Registration No.: 522263

Shenzhen Huaxia Testing Technology Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.:522263

#### 4.9 Deviation from Standards

None.

## 4.10Other Information Requested by the Customer

None.

#### Note:

The temporary antenna connector is soldered on the PCB board in order to perform conducted tests and this temporary antenna connector is listed in the equipment list.

### 5 Test results and Measurement Data

### 5.1 Antenna Requirement

Standard requirement: 47 CFR Part 15C Section 15.203 /247(c)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **EUT Antenna:**

The antenna is PCB antenna. The best case gain of the antenna is 0dBi.

## **5.2 Conducted Emissions**

| Test Method:  ANSI C63.10: 2013  Test Frequency Range:  Limit:  Frequency range (MHz)  Cuasi-peak  Average  0.15-0.5  66 to 56* 56 to 46* 0.5-5  5-30  60  5-30  *Decreases with the logarithm of the frequency.  Test Procedure:  1) The amins terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 500½50µH + 50 linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.  3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane. The vertical ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.  5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.  | Test Requirement: | 47 CFR Part 15C Section 15.207   |  |   |  |  |  |  |

#### **Measurement Data**

#### Live line:

#### Remark:

- 1. The following Quasi-Peak and Average measurements were performed on the EUT:
- 2. Final Test Level = Receiver Reading + LISN Factor + Cable Loss.
- 3. If the Peak value under Average limit, the Average value is not recorded in the report.

#### Neutral line:

#### Remark:

- 1. The following Quasi-Peak and Average measurements were performed on the EUT:
- 2. Final Test Level =Receiver Reading + LISN Factor + Cable Loss.
- 3. If the Peak value under Average limit, the Average value is not recorded in the report.

## 5.7 Spurious RF Conducted Emissions

#### Test plot as follows:

Report No.: CQASZ20190900963E-02

#### Remark:

Pretest 9kHz to 25GHz, find the highest point when testing, so only the worst data were shown in the test report. Per FCC Part 15.33 (a) and 15.31 (o) ,The amplitude of spurious emissions from intentional radiators which are attenuated more than 20 dB below the permissible value need not be reported unless specifically required elsewhere in this part.

Report No.: CQASZ20190900963E-02

Figure 2. 30MHz to 1GHz

Figure 3. Above 1 GHz

#### Test Procedure:

- a. 1) Below 1G: The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
  - 2) Above 1G: The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.

Note: For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the

|                           | measurement.   |
|---------------------------|--|
|                           | <ul> <li>d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> </ul>                             |
|                           | <ul> <li>f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> <li>g. Test the EUT in the lowest channel (2402MHz),the middle channel (2440MHz),the Highest channel (2480MHz)</li> </ul> |
|                           | h. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.  |
|                           | i. Repeat above procedures until all frequencies measured was complete.  |
| Exploratory Test<br>Mode: | Transmitting with GFSK modulation.   |
| Final Test Mode:          | Transmitting with GFSK modulation.   |
|                           | For below 1GHz part, through pre-scan, the worst case is the highest   |
|                           | channel.   |
|                           | Only the worst case is recorded in the report.   |

#### Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:
  - Final Test Level = Receiver Reading + Antenna Factor + Cable Factor Preamplifier Factor
- 2) Scan from 9kHz to 25GHz, the disturbance above 10GHz and below 30MHz was very low. As shown in this section, for frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. So, only the peak measurements were shown in the report.

# 6 Photographs - EUT Test Setup

# 6.1 Radiated Spurious Emission

30MHz~1GHz:

## Above 1GHz:

## **6.2** Conducted Emission

# 7 Photographs - EUT Constructional Details

Refer to APPENDIX 2 PHOTOGRAPHS OF EUT for CQASZ20190900963E-01.
